

GEMINI SL

Total Knee System

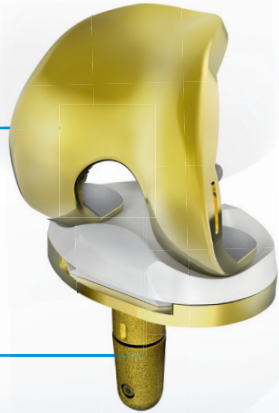

15A | 7A

ODEP rating

A rating of **15A** is given to implants, where the upper **95%** confidence interval for Kaplan-Meier revision rate was lower than **8,5%** based on ODEP's criteria for strong data quality¹.

A rating of **7A** is given to implants, where the upper **95%** confidence interval for Kaplan-Meier revision rate was lower than **6,5%** based on ODEP's criteria for the strong data quality².

The Mobile Bearing configuration of the **GEMINI SL** received this high quality rating for a knee implant awarded by the United Kingdom's Orthopaedic Data Evaluation Panel.

ODEP rating received in 2024 (Mobile Bearing PorEx) / 2022 (Mobile Bearing)

¹ 15A: A minimum cohort of 500 knees at the start of the study with a minimum of fifteen years follow-up and an actual maximum upper 95% confidence interval for Kaplan-Meier revision rate of less than 8.5%. All deaths, loss to follow-up, failures and indications for revisions are recorded. Minimum at risk at benchmark time: 42.

² 7A: A minimum cohort of 350 knees at the start of the study with a minimum of five years follow up and an actual maximum upper 95% confidence interval for Kaplan-Meier revision rate of less than 6.5%. All deaths, loss to follow-up, failures and indications for revisions are recorded. Minimum at risk at benchmark time: 55.
